

HackGT

September 23-September 25, 2016
Sponsorship Packet

Who We Are

With over 1000 talented hackers and developers from around the country, HackGT is the largest hackathon in the South. It is our responsibility as organizers of HackGT to uphold the standard of greatness and excellence to provide a welcoming and inspiring event for all attendees. We offer the opportunity for hackers to discover their passion, develop their technical abilities, and connect with companies and mentors.

Hackathons as a Platform for Recruitment

Hackathons are a great recruiting resource. Sponsors often spend too much money and invest too much time in conventional recruitment settings. At hackathons, you get a hands on opportunity to bond with hackers, allowing you to create real connections with students that truly care about technology and your company.

HackGT Has Better Sponsor Engagement

We want sponsors to get to know the students and their talents. We give sponsors exclusive access to more than just the students' resumes. We place hackers and sponsors in an environment that is more comfortable and inviting than traditional career fair booths. Our sponsor lounges provide a setting that fosters organic conversation between students and sponsors rather than a stiff elevator pitch.

API or Sponsored Prize

Any of our sponsors can provide an additional incentive for hackers to engage with their technology. Being a prize sponsor at a hackathon means offering prizes to hackers who integrate your products into their project.

Hardware Sponsors

By donating or loaning hardware, you can help students realize their ideas while receiving exposure for your products in the process. If you have a product you want hackers to use, please contact us for more information!

HackGT 2016

When: Sept 23-25

Attendees: We've had 1100 attendees at each event the past two years and over 800 submitted projects.

Focus for past years: Developing and polishing a startup idea and working as a team to pitch it. We wanted to focus more on the idea and the process of producing a product to attract more beginners and innovative hackers.

Focus this year: Providing a clean platform that emphasizes learning. Offering more technical and higher quality talks and workshops. Facilitating advanced hackers as well as inspiring beginners.
